Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 8, 14, 18 and 20-25 are rejected under 35 U.S.C. § 102(b) as being anticipated by Richards.

The patent of Richards in Figures 1-3 discloses the claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. § 103, the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 C.F.R. § 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 3743

invention was made in order for the examiner to consider the applicability of potential 35 U.S.C. § 102(f) or (g) prior art under 35 U.S.C. § 103.

Claims 4, 9 and 19 are rejected under 35 U.S.C. § 103 as being unpatentable over Richards in view of Smith, Jr. The patent of Richards discloses all the claimed features of the invention with the exception of baffles.

The patent of Smith, Jr. in Figures 1-6 discloses baffles defining fluid flow channels for the purpose of reducing flow resistance. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ in Richards baffles defining the fluid flow channels for the purpose of reducing flow resistance as disclosed in Smith, Jr.

Claims 5-7, 10-12 and 15-17 are rejected under 35 U.S.C. § 103 as being unpatentable over Richards. The patent of Richards discloses all the claimed features of the invention with the exception of the claimed number of channels. The claimed number of channels is considered to be an obvious design choice which does not solve any stated problem or produce any new and/or unexpected result.

Claim 13 is rejected under 35 U.S.C. § 103 as being unpatentable over Richards in view of Eriksen et al. The patent of Richards discloses all the claimed features of the invention with the exception of a spiral channel.

The patent of Eriksen et al. in Figure 5 discloses a spiral fluid flow channel for the purpose of reducing flow resistance. It would have been obvious at the time the invention was made to a

Art Unit: 3743

person having ordinary skill in the art to employ in Richards a spiral fluid flow channel for the purpose of reducing flow resistance as disclosed in Eriksen et al.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
